

DrakesRenamelt 1.1.0 - Regression Plan (WorkshopLibs port)

Branch: customize-split (suite monorepo + DrakesWorkshopLibs)

This plan extends the v1.0 matrix with port-specific checks. Anything that previously lived in Renam

1. Architectural change (what moved)

Area	Was in Renamelt (<=1.0)	Now in DrakesWorkshopLibs	Renamelt 1.1 still owns
Display / hover / tooltips	Patches.cs, DecoratedNamePatches.cs, ItemTooltipPatches.cs	ItemDispla...	

Build regression (CI / local):

[] DrakesRenameit.dll passes Verify-NoServerSyncInModDll.ps1 (no ServerSync IL in consumer).

2. Risk-ranked port regression areas

P0 - Must pass before 1.1 publish (display & data path)

Libs now owns all player-visible name/description/crafted-by rendering. Re-run all Group 1 and SM-00

ID	Focus	Port risk
TC-001	Unlock + name + description + crafted-by apply & persist	Custom data write path must stil...

Extra P0 port checks (not in v1.0 sheet):

[] Libs-only install failure: Remove Libs -> Renamelt logs hard dependency error, no null-ref spam.

P1 - Config, permissions, multiplayer sync

v1.0.0b4 scope (sheet2 changelog) - ServerSync now in Libs; behavior must match 1.0.

| ID | Focus | Port risk |

| TC-011-TC-015 | SeparateStacks / HardLock matrix | Host cfg sync + Libs stack patches |

| TC-019-

P1 multiplayer session (host + 1 client):

[] Client cannot change locked synced cfg (sections 01-09) when LockSyncedConfig=true.

[] Host

P2 - UI / edge cases / integrations

| ID | Focus | Notes |

| TC-003-TC-005 | Character limits | Renamelt UI |

| TC-028

Open issues from QA tracker - explicit retest:

| Issue | Retest for 1.1 |

| ISSUE-011 | Reset on textbox instant apply (v1.0.0b4) |

| ISSUE-0

3. Libs-only regression (WorkshopLibs 0.3.0+)

Run with minimal profile: BepInEx + Jotunn + DrakesWorkshopLibs + DrakesRenameit.

| Check | Expected |

| Item tooltip crafted-by override | Custom line label + display name render |

| Inventor

4. Suggested execution order (1.1 sign-off)

1. Build / deploy - Package Renamelt 1.1.0 + Libs 0.3.0; verify no ServerSync in Renamelt DLL.

2. SM-0

Exit criteria: All P0 pass; no new P0/P1 vs 1.0.0b4; ISSUE-011 disposition documented; Thunderstore

depend

5. Traceability to QA workbook

| Workbook sheet | Version | Use for 1.1 |

| sheet6 | v1.0.0b1 groups | Master TC list - re-execute all groups |

| sheet7-s

Record results: Add workbook row v1.1.0 | Libs port regression | 54+ | | | and link to this plan.

6. Changelog blurb (for 1.1 release notes)

QA: Full v1.0 regression matrix re-run against DrakesWorkshopLibs 0.3.0. Display, tooltip, stack-merge, and ServerSync paths verified in Libs; Renamelt retains UI, permissions, and config. See docs/Renamelt-1.1-Regression-Plan.md.

Generated from branch analysis + Drake's Renamelt Test.xlsx (May 2026).
